Description of the Defect:

Some of the stop lamp switches supplied by INFAC Corporation and installed by Kia in the vehicles identified in 573.6(c) (2) may have been damaged during assembly at the supplier. Some stop lamp switches may experience sticking of the switch plunger within the threaded hollow shaft. If the problem exists, the following symptoms may occur:

- The Electronic Stability Control (ESC) light may illuminate indicating ESC off.
- The shifter will not move out of the Park (P) position.
- The brake lights may not come on when the brake pedal is depressed.
- The brake lights may remain illuminated when the brake pedal is released.
- Depressing the brake pedal may not deactivate the Cruise Control (if equipped).

573.6(C)(6)

Basis for Defect Determination:

In the middle of March 2009, INFAC Corporation informed Kia Motors Corporation (KMC) that the some of the stop lamp switches may have been damaged during the assembly process. Following the receipt of that information, KMC conducted further evaluation and analysis of the condition.

On April 10, 2009, KMC concluded its analysis and determined that the product condition described in Section (C)(5) existed and warranted this action.

There is no report of accidents or injuries as a result of this condition.

573.6(C)(8)(i)

Program to Remedy Defect:

All owners of vehicles identified in (C)(3) will be notified by first class mail to bring their vehicle to a Kia dealer. Kia will replace the stop lamp switch to eliminate the possibility that this condition might exist.
